

SFC-KOENIG

Leader in
Sealing & Flow Control
Technology

┆ KOENIG EXPANDER® KOENIG CHECK VALVE® KOENIG RESTRICTOR® ┆

The World's Leading Sealing & Flow Control Technology

With over 3 billion parts installed and failure rates less than 1 part per million, SFC KOENIG® is recognized around the world for reliable, safe and effective sealing and flow control. With our unique expanding seal technology our parts reduce contamination, withstand high pressures and provide leak-free performance for long life cycles.

SFC KOENIG is the original inventor of the one piece, metal-to-metal sealing solution, the KOENIG EXPANDER®, and all SFC KOENIG components are recognized for best-in-class performance in even the most critical applications.

With over 80 years of experience, SFC KOENIG is ready to deliver a solution designed for your application and can integrate our products into your production and workflow processes. Our expert engineers are ready to design a custom part to meet your specific requirements, and we offer a wide variety of standard sizes, designs and configurations for our full line of easy-to-install components.

SFC KOENIG

Leader in
Sealing & Flow Control
Technology

Proven Precision & Reliability

SFC KOENIG components are proven effective in a diverse array of applications, and are the ideal solution wherever safe and secure sealing and flow control is needed. We maintain a variety of manufacturing and industry-specific certifications, and our engineers are ready to assist with a customized solution that meets your exact specifications and requirements. With over 3 billion parts installed, SFC KOENIG components are proven effective and are ready to meet your toughest sealing and flow control challenge.

FLUID POWER

SFC KOENIG parts are ideal for hydraulics, manifolds, mobile power units, valves, pumping and other fluid power systems. We deliver reliable, leak-free sealing and flow control, with tamper-proof designs that provide long life cycles and withstand the harshest environments.

TRANSPORTATION

Leading automotive and vehicle system manufacturers rely on SFC KOENIG solutions for optimized safety and reliability. We maintain IATF 16949 certification and our parts are proven reliable for the operational extremes and high-vibration levels found in engines, transmissions, turbo chargers, braking, fueling and transportation .

MEDICAL

Offering the highest levels of safety, security and dependability, SFC KOENIG components meet the strict requirements of medical, surgical, optical and dental applications. From life-saving equipment to environmental controls, our best-in-class performance is relied on in even the most mission-critical applications.

OFFSHORE & MARITIME

The corrosive, harsh conditions found in maritime and offshore applications are reliably handled by SFC KOENIG components. Our sealing and flow control solutions have been used a diverse array of applications, including shipping, natural gas compressors, pumps, fluid density probes and more.

AEROSPACE

The aviation and aerospace industries rely on SFC KOENIG components for lightweight, high-pressure performance. From flight controls to jet engines, our parts provide safe and effective sealing and flow control in extreme environmental conditions.

Unrivaled Sealing & Flow Control Solutions

KOENIG EXPANDER®

The KOENIG EXPANDER® is the original one-piece, metal-to-metal sealing solution. With over 3 billion parts installed and a failure rate less than 1 PPM (part per million), these no-leak sealing plugs permanently resist pressures up to 500 bar and are proven effective – even for the sealing of angled channels and deep holes. The KOENIG EXPANDER® offers easy installation for a variety of applications and configurations, and is the industry's leading technology for the sealing of drilled holes.

KOENIG CHECK VALVE®

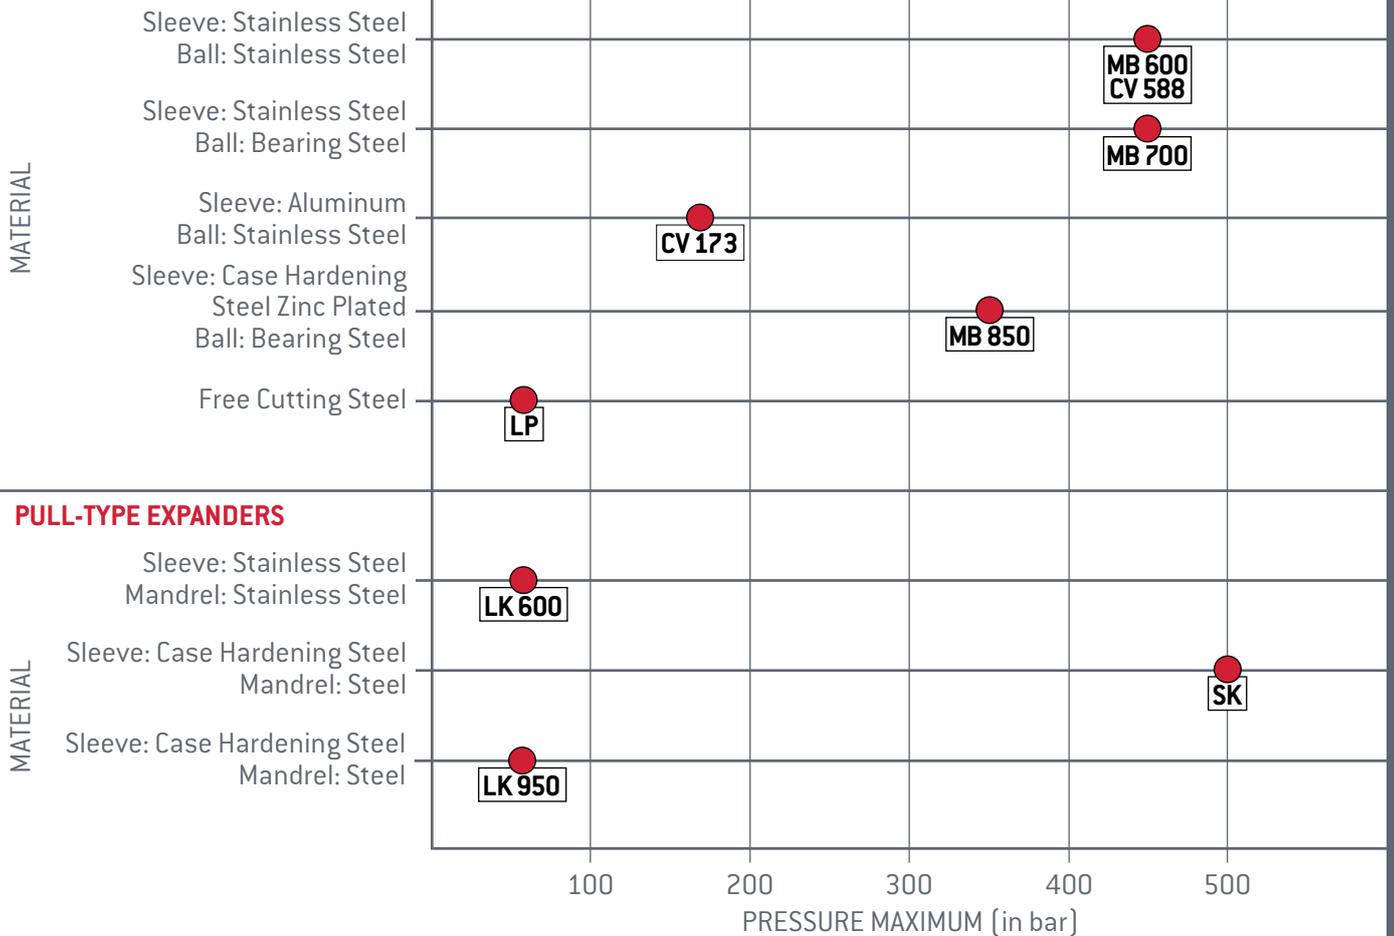

With its self-contained, ball-style design and stainless steel construction, the KOENIG CHECK VALVE® provides precise flow control and minimal leakage, leveraging proven SFC KOENIG expander sleeve technology and flow control expertise to provide a highly-accurate solution. Available in a variety of sizes, cracking pressures, and in forward-flow and reverse-flow designs, the KOENIG CHECK VALVE® is effective for fast and dependable flow control.

KOENIG RESTRICTOR®

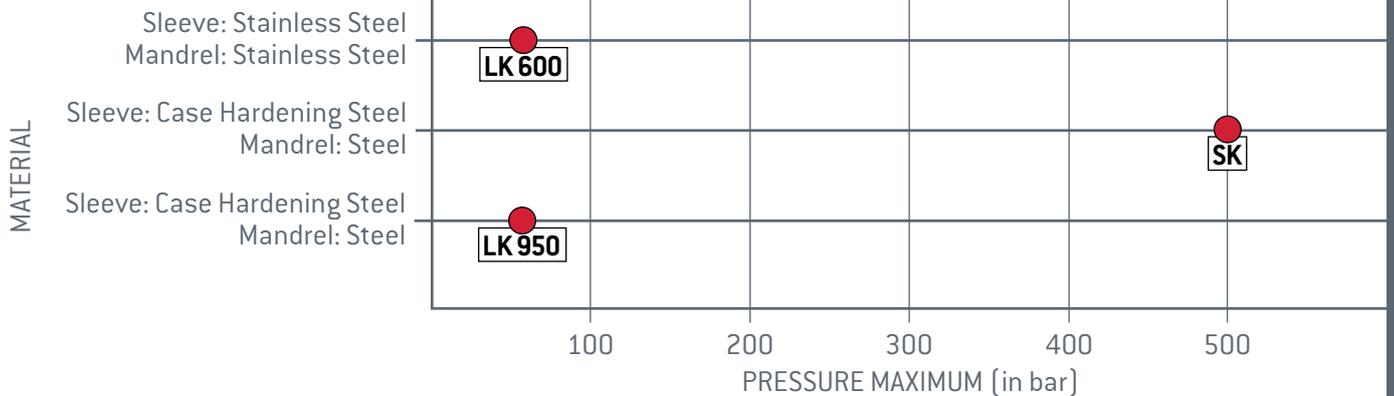

Designed for accurate flow control in even the most precise applications, the KOENIG RESTRICTOR® is ideal for deep-hole installations and wherever dependable, no leak fluid restriction is needed. The KOENIG RESTRICTOR® is available in a variety of orifice sizes customized for your flow rate, and is offered with or without an integrated screen, providing a reliable, one-piece flow control solution.

MATERIAL / PRESSURE

PUSH-TYPE EXPANDERS

PULL-TYPE EXPANDERS

FLOW RATE / PRESSURE

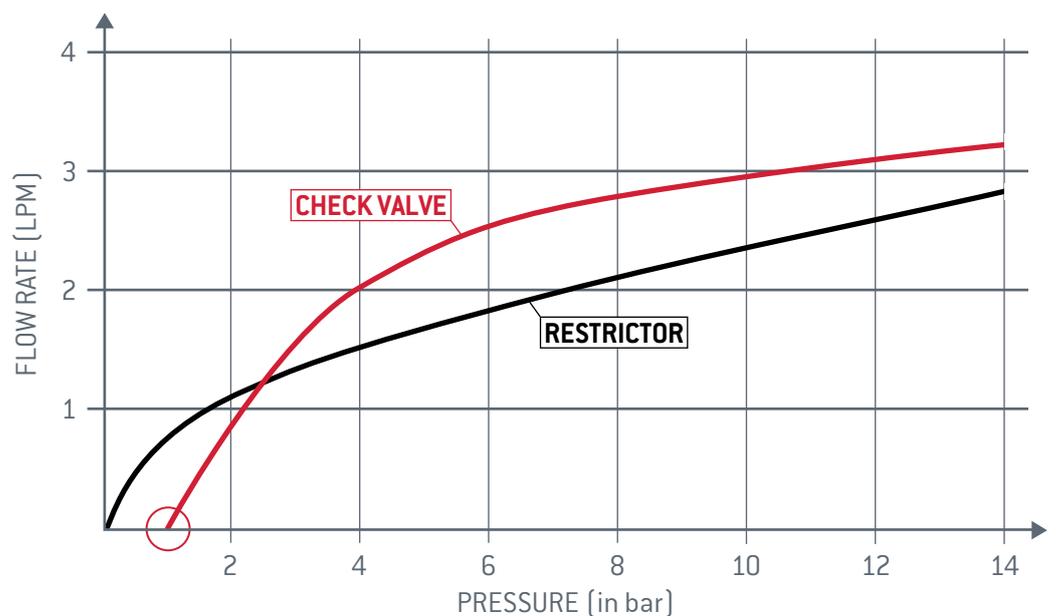

FUNCTIONS

CHECK VALVE

- Opening Pressure: Allow the flow from e.g. 1 bar in flow direction 
- Control fluid pressure in circuits
- Backflow prevention

RESTRICTOR

- Flow Limiter: Control the amount of fluid being supplied
- Orifice diameters customized to your flow requirements

Content

PUSH-TYPE EXPANDERS / PAGES 8–27

KOENIG EXPANDER® plugs effectively seal drilled holes. These parts feature a serrated sleeve which expands as the ball is inserted, enlarging the part to the needed size and sealing the hole. For installation, push-style expanders require a hole drilled with a counter bore.

SERIES MB / CV / Pages 8–27

- Sealing plugs for operating pressures up to 450 bar / 6500 psi
- Wide range of sizes from Ø 3 – 22mm
- Corrosion-resistant versions available
- Fast, easy installation

LOW-PRESSURE EXPANDERS / PAGES 38–41

Based on a press fit and anchoring concept, low-pressure style expanders use a conical press-in sleeve. During installation, the press-in sleeve adapts to the bore and the outer serration bites into the bore wall.

SERIES LP / Pages 38–41

- Sealing plugs for operating pressures up to 60 bar / 850 psi
- Short installation dimensions
- Mechanical sealing using press fit
- Quick installation

PULL-TYPE EXPANDERS / PAGES 28–37

Pull-style expanders use an integrated mandrel to insert the expander plug into a drilled hole. This type of KOENIG EXPANDER® does not require the hole to be counter-bored, and is often used for angled channels or installations with difficult orientations. They are ideal for installations with space or weight constraints.

SERIES SK / Pages 28–33

- Sealing plugs for operating pressures up to 500 bar / 7200 psi
- Short installation length
- Liberal manufacturing tolerance 0 / + 0.12mm
- Extended mandrel for deeper setting

SERIES LK / Pages 34–37

- Sealing plugs for operating pressures up to 60 bar / 850 psi
- Short installation dimensions
- Liberal manufacturing tolerance 0 / + 0.12mm
- Comprehensive product range for Ø 4 – 20 mm

FLOW CONTROL / PAGES 42–53

The KOENIG RESTRICTOR® is designed to restrict flow in fluid systems and is available in a variety of orifice sizes. The KOENIG CHECK VALVE® controls the flow of fluids and is available in a variety of cracking pressures.

CHECK VALVES / Pages 42–49

- Forward-flow and reverse-flow types available
- Pressure rated up to 300 bar / 4350 psi
- Standard units available in various cracking pressures
- Stainless steel design is standard
- Available in a range of standard size diameters and flow rates

SERIES RE - RESTRICTORS / Pages 50–53

- Can be used with fluids or gases
- Stainless steel design is standard
- Orifices can be calculated to achieve desired flow rates
- Expansion style easily installs into drilled holes and is tamper resistant

SPECIAL ORDERS / PAGE 55

SETTING TOOL EQUIPMENT / PAGES 56–65

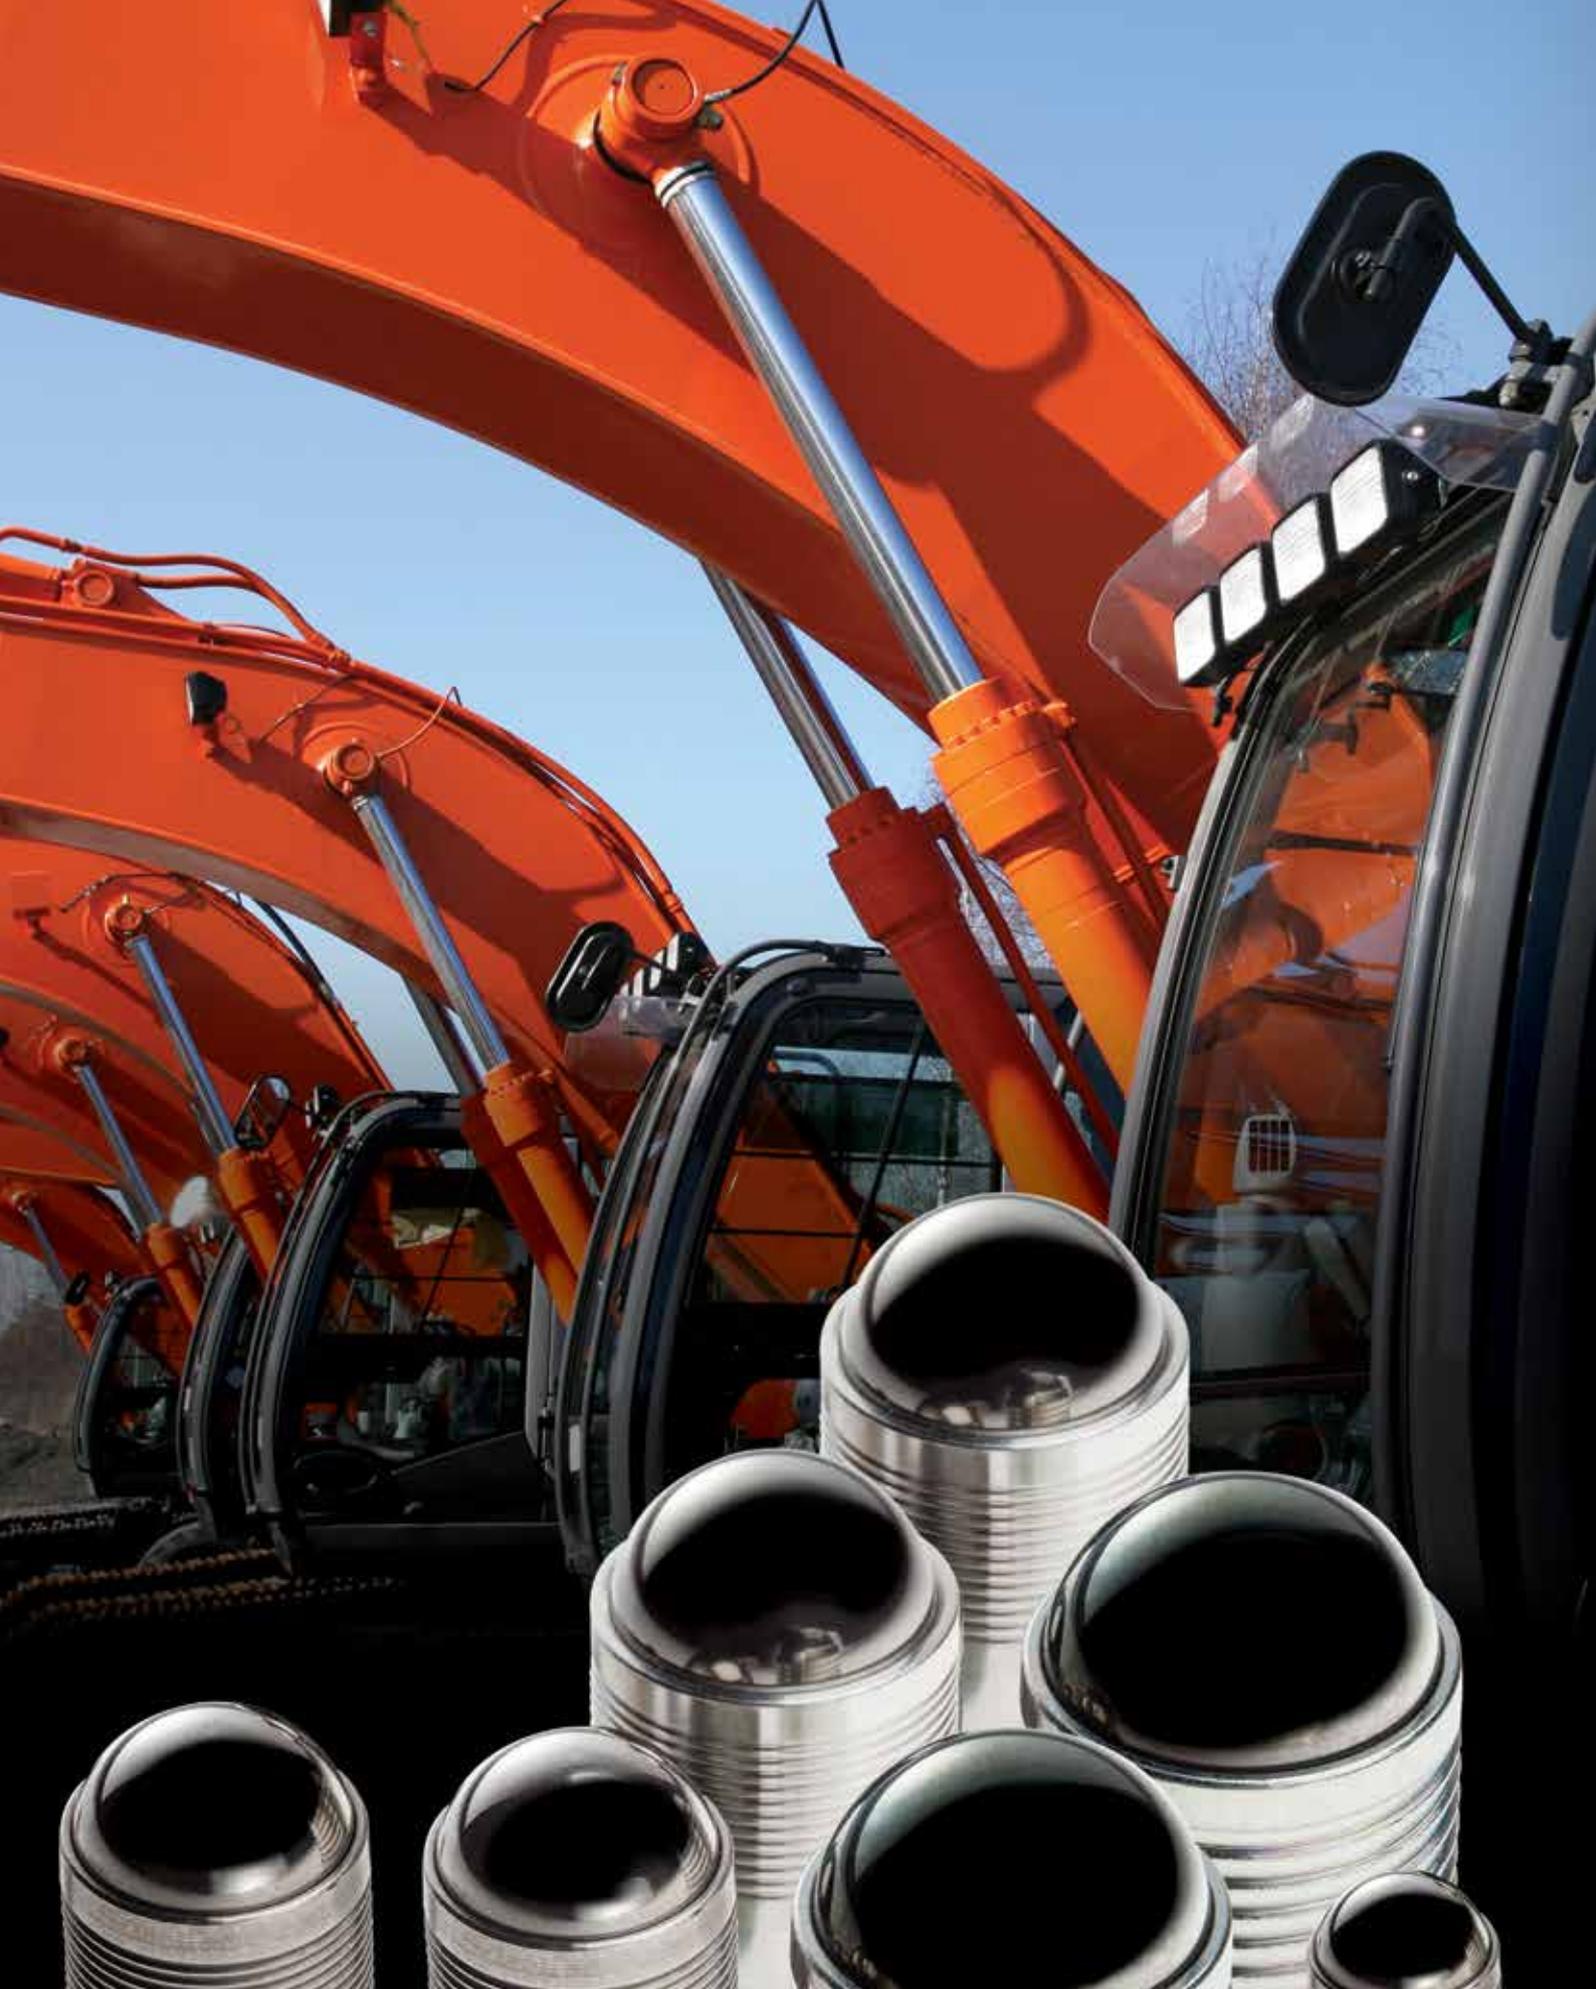

SFC KOENIG® offers a variety of setting tools and equipment to assist in the installation of our parts.

- EXPRESS 3000 - Hydropneumatic Table Presses
- EXPRESS 5000 - Hydropneumatic Table Presses
- EXTTOOLS 030, 040-1, 040-2 and 050
- EXTTOOLS B-010
- KW-008 - Hand Lever Tool with Equipment Ø 4 – 6 mm

SYSTEMS AND AUTOMATION SOLUTIONS / PAGE 67

QUALITY ASSURANCE / PAGE 94

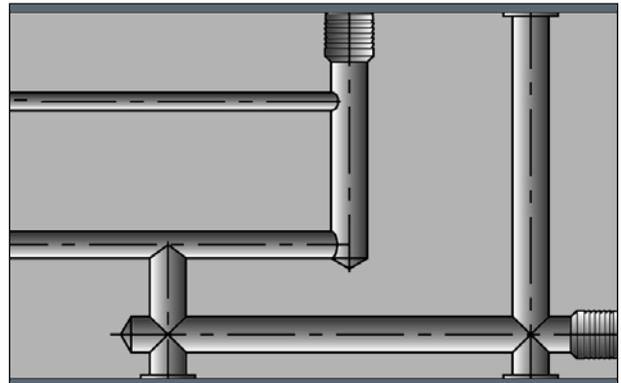

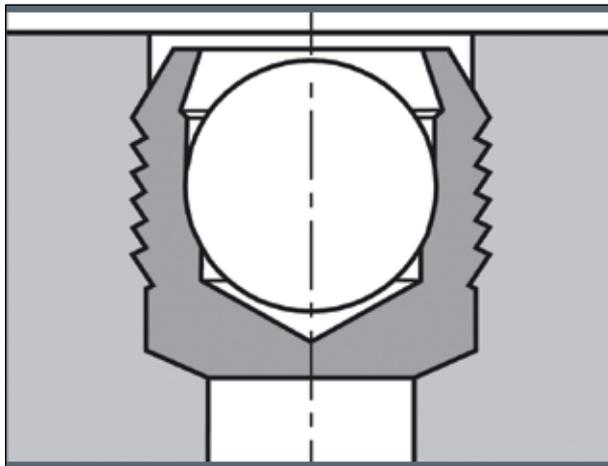

Full Line of Sealing & Flow Control Technologies

KOENIG EXPANDER®

Series MB / CV

Sealing Plugs for Operating Pressures up to 450 bar / 6500 psi

- Operating pressures up to 450 bar / 6500 psi
- Comprehensive range of products for \varnothing 3 – 22 mm, also available in inch version
- Corrosion-resistant version
- Available in aluminum
- Standard drilling manufacturing tolerance 0 / + 0.10 mm
- Swift and easy installation
- Purely mechanical sealing through anchorage system

Please inquire with our sales or applications engineers about requirements for special materials or configurations not shown in the catalog.

KOENIG EXPANDER®

Series SK

Sealing Plugs for Operating Pressures up to 500 bar / 7200 psi

- Operating pressures up to 500 bar / 7200 psi
- Short installation length
- Liberal manufacturing tolerance 0 / + 0.12 mm
- Direct installation into hydraulic bores
- Purely mechanical sealing through anchorage system
- Swift installation using convenient processing tools

Please inquire with our sales or applications engineers about requirements for special materials or configurations not shown in the catalog.

KOENIG CHECK VALVE®

Check Valves – Series BF and BR

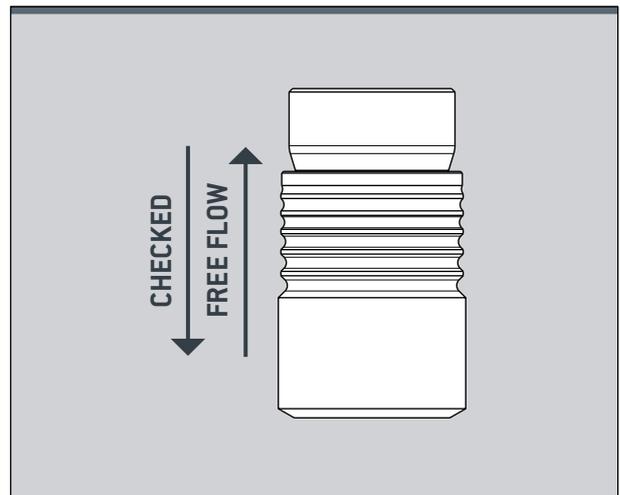

Max. Working Pressure Differential: 280 bar / 4060 psi in Checked Direction

- Design based on the expansion principal
- Modular concept: Forward Flow (BF) / Reverse Flow (BR)
- Maximum working pressure differential: 280 bar / 4060 psi in checked direction
- Available in standard sizes, with different opening pressures and screens
- Specific customer solutions on request

CHECK VALVE FORWARD FLOW (BF)

CHECK VALVE REVERSE FLOW (BR)

Please inquire with our sales or applications engineers about requirements for special materials or configurations not shown in the catalog.

KOENIG RESTRICTOR®

Orifices – Series RE

- Expansion style restrictors
- Can be used with fluids or gases
- Standard restrictors in 300 series stainless steel
- Orifices can be calculated to achieve desired flow rates
- Expansion style easily installs into drilled holes and is tamper resistant

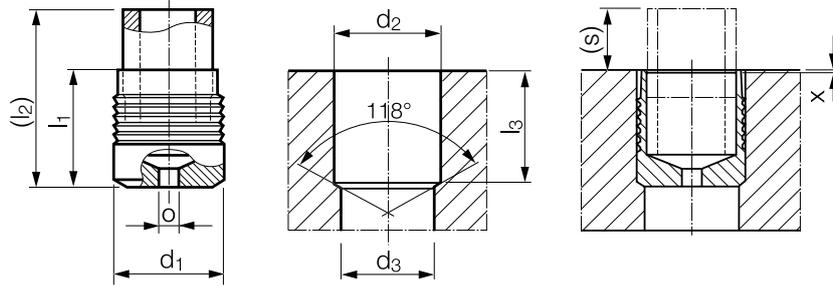

Please inquire with our sales or applications engineers about requirements for special materials or configurations not shown in the catalog.

Special Orders

In addition to our standard product line, SFC KOENIG can provide customized parts and unique solutions specially designed for your installation.

Our in-house engineering staff is available to assist you with your needs. With decades of expertise in sealing we meet even the most unique requirements, producing parts that are tailored to your exact application. Our team includes some of the industry's most experienced engineers and manufacturing personnel, and we deliver the solutions others cannot.

From material to size to operation, we are able to customize our components to meet unique installations. With over 3 billion parts delivered to customers around the world, we are experts in sealing and flow control, and are ready to apply that knowledge to your order.

SFC KOENIG maintains failure rates less than 1 part per million, delivering reliable solutions with unmatched consistency. Our engineering expertise, quality controls and efficient manufacturing operations are designed to produce the highest quality parts for each customer's requirements.

SFC KOENIG brings more than 80 years of success to the design processes. From the initial design consultation to testing, production and process integration, we are ready to work with you to solve your unique sealing and flow control challenge.

SETTING TOOLS EXPRESS 3000/5000

Hydropneumatic Table Press for Series MB / CV / LP / BF / BR / RE with Force and Distance Control

Hydropneumatic setting tool for the installation of KOENIG EXPANDER®. Quick tool change avoids long changeover times. The required working stroke is preprogrammed and can be retrieved by the Expander type to be processed (max. 64 memory locations). In addition, the working stroke is referenced for each individual Expander, which guarantees high process stability and quality. The press is force and distance controlled; an RS232 or USB interface can be used to trace corresponding data on the customer's computer for later processing. The required software is included in the scope of delivery.

EXPRESS 3000 – For the installation of KOENIG EXPANDER Series MB, CV and LP from Ø 3 - 10mm (.093" - .375" inch), KOENIG CHECK VALVE BF and BR 5.5 and 8mm, and KOENIG RESTRICTOR Series RE from Ø 4 - 10mm.

EXPRESS 5000 – For the installation of KOENIG EXPANDER Series MB and CV Ø 12 - 22mm (.406" - .437" inch) and Series LP for Ø 12mm.

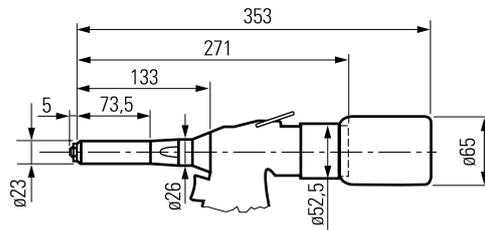

SETTING TOOL DATA			
EXPRESS 3000		EXPRESS 5000	
Height	approx. 1360 mm	Height	approx. 1470 mm
Width	approx. 340 mm (max. 530 mm)	Width	approx. 400 mm (max. 580 mm)

Table (width x depth)	220 x 160 mm	Table (width x depth)	300 x 190 mm
Weight	approx. 140 kg	Weight	approx. 190 kg
Compressive force	30 kN (max force 29.5 kN at 6 bar)	Compressive force	50 kN (max force 52.5 kN at 6 bar)
Working stroke	10 mm (within the cylinder ram)	Working stroke	15 mm (within the cylinder ram)
Working speed	40 mm/sec (max. possible at 6 bar)	Working speed	30 mm/sec (max. possible at 6 bar)

SETTING TOOL DATA	
EXPRESS 3000 and EXPRESS 5000	
Working area (height)	250 mm (working height between table top and cylinder, without setting tool)
Working area (depth)	200 mm (center-line spacing between cylinder and C frame)
Cylinder ram	60 mm
Operating voltage	230 V/110 V, automatic switchover to corresponding power supply
Operation	VISUAL POINT terminal with QVGA graphic display
Force / distance control	Sensor adjusted with SIT reference sensor
Software	WINSCOPE Software for connecting to a PC

SETTING TOOL EXT00L-030

Hydropneumatic Tool for Series LK / SK with Mandrel Collection Device

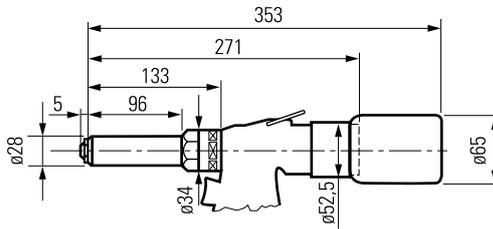

TECHNICAL DATA

Type	EXT00L-030
Series	LK / SK
Order number	300160392
Weight	2.5 kg
Pull force at 7 bar	19 kN
Working stroke	25 mm
Air supply pressure (min. - max.)	5-7 bar
Air consumption at 5-6 bar	3.5 l
Noise level	< 75 dB(A)
Cycle time	2.0 s
Nosepiece (not included) LK600-040	300161993
Nosepiece (not included) Expander LK and SK Ø 4.0	300161899
Nosepiece (not included) Expander LK and SK Ø 5.0	300161901
Nosepiece (not included) Expander LK and SK Ø 6.0	300161902
Jaws Expander LK and SK Ø 4.0 - 6.0	300161883
Jaws case Expander LK and SK Ø 4.0 - 6.0	300161882
Jaws pusher Expander LK and SK Ø 4.0 - 6.0	300161884

Without nosepiece

SETTING TOOL EXT00L-040-1

Hydropneumatic Tool for Series LK / SK with Mandrel Collection Device

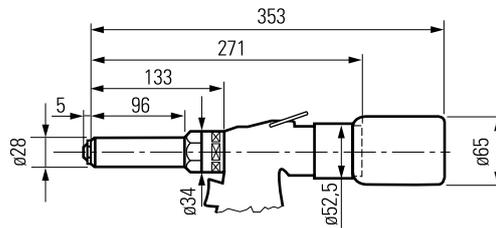

TECHNICAL DATA	
Type	EXT00L-040-1
Series	LK / SK
Order number	300160393
Weight	2.7 kg
Pull force at 7 bar	24 kN
Working stroke	18 mm
Air supply pressure (min. - max.)	5-7 bar
Air consumption at 5-6 bar	3.5 l
Noise level	< 75 dB(A)
Cycle time	2.0 s
Nosepiece (not included) Expander LK and SK Ø 7.0	300161911
Nosepiece (not included) Expander LK and SK Ø 8.0	300161912
Nosepiece (not included) Expander LK and SK Ø 9.0	300161913
Nosepiece (not included) Expander LK and SK Ø 10.0	300161914
Jaws Expander LK and SK Ø 7.0 - 10.0	300161903
Jaws case Expander LK and SK Ø 7.0 - 10.0	300161900
Jaws pusher Expander LK and SK Ø 7.0 - 10.0	300161905

Without nosepiece

SETTING TOOL EXT00L-040-2

Hydropneumatic Tool for Series LK / SK with Mandrel Collection Device

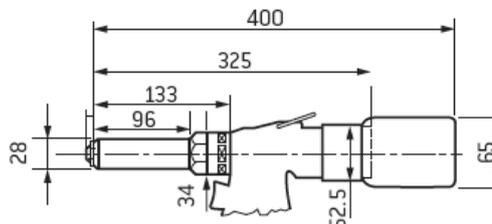

TECHNICAL DATA

Type	EXT00L-040-2
Series	LK / SK
Order number	300160394
Weight	2.7 kg
Pull force at 7 bar	24 kN
Working stroke	18 mm
Air supply pressure (min. - max.)	5-7 bar
Air consumption at 5-6 bar	3.5 l
Noise level	< 75 dB(A)
Cycle time	2.0 s
Nosepiece (not included) Expander LK and SK Ø 12.0	300161931
Nosepiece (not included) Expander LK and SK Ø 14.0	300161932
Nosepiece (not included) Expander LK and SK Ø 16.0	300161933

Equipment Ø 7.0 - 10.0 (nosepiece not included)	300179926	
Nosepiece Expander LK and SK Ø 7.0		300161911
Nosepiece Expander LK and SK Ø 8.0		300161912
Nosepiece Expander LK and SK Ø 9.0		300161913
Nosepiece Expander LK and SK Ø 10.0		300161914
Equipment Ø 12.0 - 16.0 (nosepiece not included)	300179927 (LK only)	
Nosepiece Expander LK Ø 12.0		300161931 (LK only)
Nosepiece Expander LK Ø 14.0		300161932 (LK only)
Nosepiece Expander LK Ø 16.0		300161933 (LK only)

Nosepieces and Equipment Kit are required and must be purchased separately.

SETTING TOOL KW-008

Mechanical Hand Lever Tool for Series SK / LK

TECHNICAL DATA

Type	KW-008	
	SK	LK
Series	SK	LK
Order number	300159301	300159301
Weight	1.95 kg	1.95 kg
Length	515 mm	515 mm
Nosepiece Expander \varnothing 3.0	-	-
Nosepiece Expander \varnothing 4.0	DPM400-C10	DPM400-B10
Nosepiece Expander \varnothing 5.0	DPM400-D10	DPM400-D10
Nosepiece Expander \varnothing 6.0	DPM400-E10	DPM400-E10
Jaws \varnothing 3.0 - 6.0	PRG 540-46E	PRG 540-46E

Hand lever tool with equipment for SK and LK \varnothing 3 - 6mm

Systems and Automation Solutions

At SFC KOENIG, a complete sealing and flow control solution means the right products are combined with the right assembly and installation processes. By helping customers integrate our parts into their operations we are able to improve efficiency, improve consistency and lower total costs. Our team is ready to work with you to develop a complete automation solution designed for your needs.

We support customers throughout the entire process – from planning, design and product selection, through to development and implementation. SFC KOENIG automation equipment, such as presses and hydraulic tools, combined with our process integration services, allows us to deliver a customized total solution for your operation.

In conjunction with our automation partners, SFC KOENIG offers single-head workstations as well as fully-automated assembly equipment. The direction, type and number of assembly heads can all be customized and integrated into your production line. Built-in processing diagnostics control the assembly process for improved product quality.

SFC KOENIG automation solutions help to ensure that products are placed accurately and consistently, eliminating errors and potential risks. Our customized solutions are developed for efficiency and help you reduce assembly time and lower costs. Our high quality assembly systems:

- are efficient and reliable
- automatically feed sealing and flow control products
- easily integrate into assembly lines
- strictly control the installation process
- offer process flexibility
- improve product quality
- feature a modular design of the placing head
- are capable of high process speeds
- feature PLC control and monitoring
- increase throughput
- utilize a robust design

TECHNICAL INFORMATION

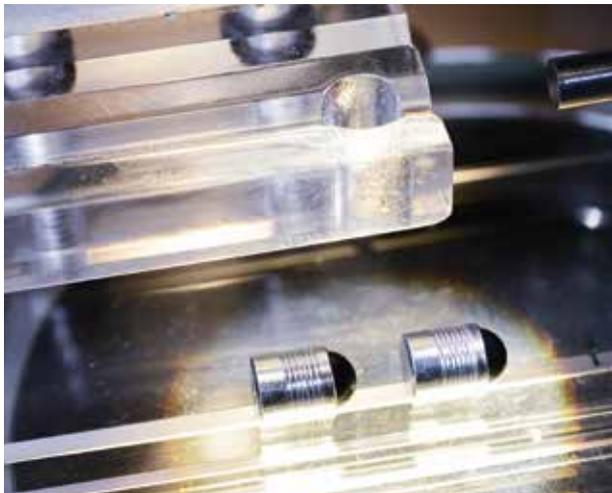

Information About CV Series Available Upon Request

KOENIG EXPANDER®

KOENIG CHECK VALVE®

KOENIG RESTRICTOR®

Our technical information section contains reference details related to performance, installation and materials. SFC KOENIG engineers are available to assist you at any time, and can advise on questions and concerns about your individual application. We also offer special orders for customized solutions to meet your individual needs.

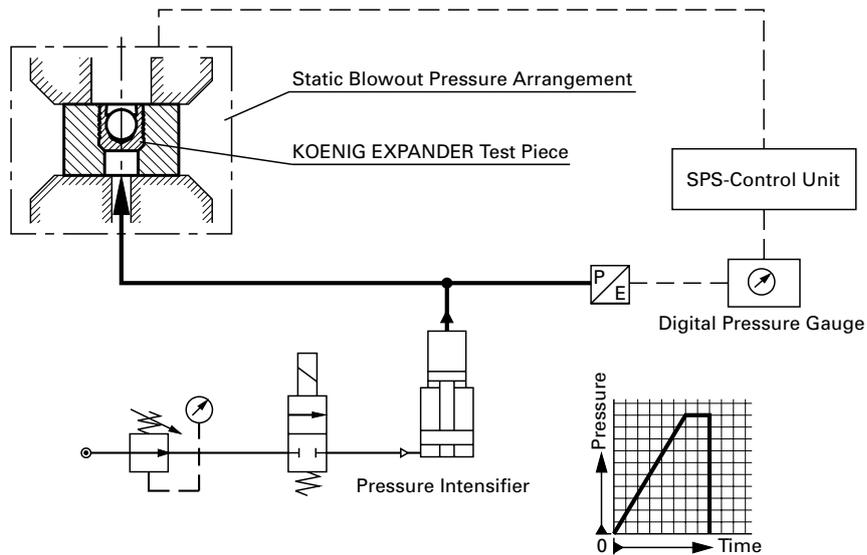

KOENIG EXPANDER® TEST PRESSURE

TEST PRESSURE[Ⓐ]

The KOENIG EXPANDER® is statically loaded up to burst pressure. This test is performed at SFC KOENIG for functional testing during the production process.

Samples from each production batch are subjected to this functional test.

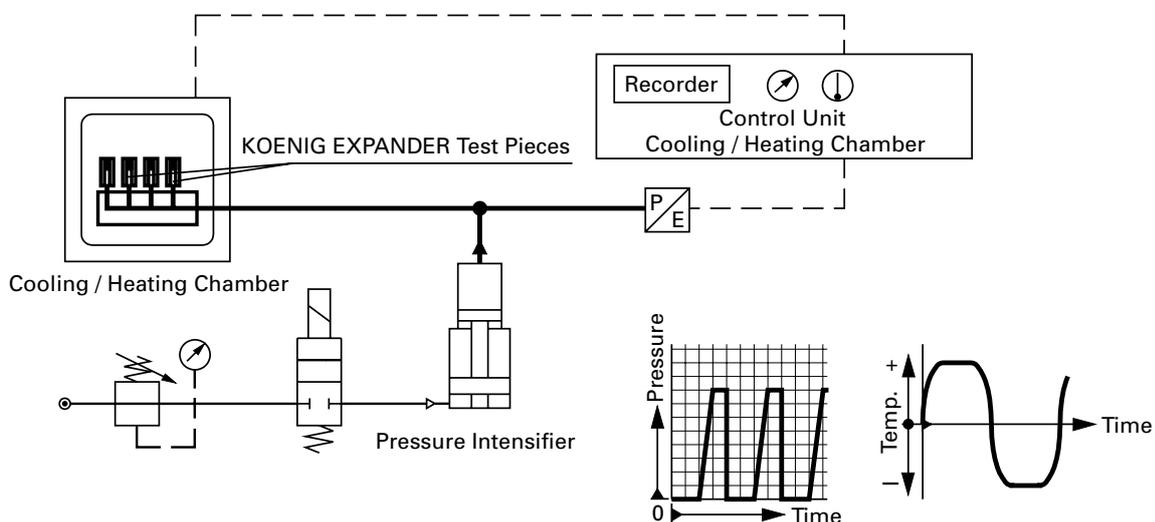

TEST PRESSURE, TEST[Ⓑ]

The KOENIG EXPANDER® is subjected to a pressure cycling test under varying environmental conditions. The test determines the levels of pressure that can be absorbed by the part by applying intermittent pressure loads and temperature fluctuations to confirm the sealing plug is not squeezed out.

CONDITIONS

- Temperature: 2 hrs at +100° C (Series LK/LP at 150° C) / 2 hrs at – 40° C temperature cycle 30 – 45 min.
- Pressure: Intermittent, 2 min 0 bar, 3 min test pressure
- Duration: 168 hrs (long-term test)
- Bore: Tolerance, roundness and roughness in accordance with standard sheets, plain surface, edge and wall distance according to standard sheet

BASE MATERIALS / INSTALLATION REQUIREMENTS

Operating pressures listed can be achieved for the following base materials:

Base Material of the Installation	Tensile Strength Rm [N/mm ²]	Elongation A5 [%]	Yield Strength Rp0.2 [N/mm ²]	Hardness HB
① High Strength Steel ETG-100 / 44SMn28 AISI 1144	960 - 1000	6	min. 865	320 avg.
② Case Hardened Steel C15Pb / 1.0403 AISI 10L15	430 - 730	10	min. 280	200 avg.
③ Ductile Cast Iron EN 1563: GJS-600-3 ASTM A536: 80-60-03	min. 600	3	min. 370	200 - 290
④ Ductile Cast Iron (Dura-Bar®) EN 1563: GJS-450-10 ASTM A536: 65-45-12	450 avg.	12	310 avg.	131 - 217
⑤ Gray Cast Iron EN 1561: GJL-250 ASTM A48: NO.35	350 avg.	0.3	165 - 228	160 - 250
⑥ Aluminum-Alloy AlCu4Mg1 / EN AW-2024-T3 AA: 2024 T4/T6*	min. 450	8	min. 310	120 avg.
⑦ Aluminum-Alloy AlMgSiPb / EN AW-6012-T6 AA: 6012-T6	min. 310	8	min. 260	105 avg.
⑧ Cast Aluminum-Alloy G-AISI7Mg / EN-AC-42100 ASTM/UNS: A356	min. 230	2	min. 190	min. 75

*SFC KOENIG's North American Engineering Department utilizes 2024-T4/T6 as a test base material.

- Equally high working pressures can also be achieved with base materials with similar mechanical properties. However, compliance must be met for the appropriate installation conditions.
- Applications in cast aluminum, magnesium alloys, nonferrous metals and plastics require special consideration and can be developed upon request.
- Applications in base materials with high hardness and hardened materials, require special consideration and can be developed upon request.
- **Applications in surface coated materials (zinc plated, anodized ...) require special consideration and can be developed upon request.**
- For factors affecting pressure performance please see:
 - Anchoring Principle
 - Surface Finish: Requirements
 - Design Guidelines

SAFETY MARGIN

The safety margin includes uncontrollable factors. Dynamic loads at nominal pressure, with 10⁶ load cycles and a frequency of 3 – 4 Hz have shown that the subsequently measured bursting pressures, are reduced according to Test Ⓐ by 20 % as well as Test Ⓑ.

PRESSURE PERFORMANCE

Proof Pressure TestⓈ Max. Allowable Working Pressure = Nominal Pressure *SFC KOENIG's North American Engineering Department utilizes 2024-T4/T6 as a test base material.

Base Material Harder than Expander: To achieve the allowable working pressure, anchorage to the bore roughness of the base material is required. Roughness R_z = 10 – 30 µm.

Base Material Softer than Expander: Anchorage to the bore of the base material occurs automatically due to the serrations on the sleeve of the KOENIG EXPANDER®.

Transition Zone: To achieve the allowable working pressure, anchorage to the bore roughness of the base material is required. Roughness R_z = 10 to 30 µm.

See Anchorage Principles related to the base materials on page 74.

ANCHORAGE PRINCIPLE

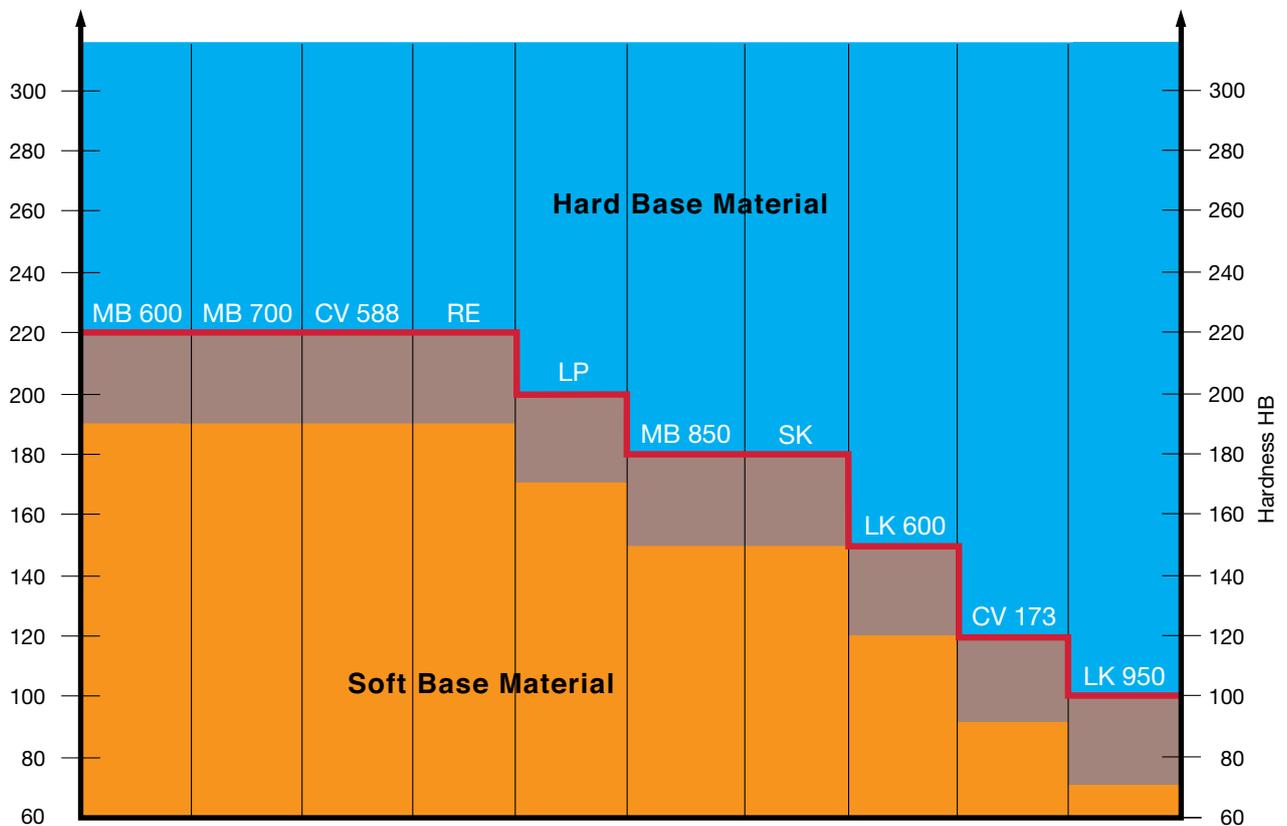

The required bore roughness is directly related to the hardness and the mechanical characteristics of the base material. Depending on the combination of sealing plug and base material, anchorage takes place either by the groove profile of the expander sleeve biting into the base material or on anchorage to the surface roughness of the bore.

Note:

When selecting a KOENIG EXPANDER® the bore roughness must always be adjusted according to the hardness of the base material.

Anchorage between sleeve and base material is achieved when the sleeve is a minimum of HB = 30 greater than the base material. If the hardness difference is less, hole roughness of 10 to 30 µm is needed to achieve indicated working pressures.

Anchorage Principle Related to the Base Material

KOENIG EXPANDER®

Base Material Harder than Expander: To achieve the allowable working pressure, anchorage to the bore roughness of the base material is required.
Roughness $R_z = 10 - 30 \mu\text{m}$.

Transition Zone: To achieve the allowable working pressure, anchorage to the bore roughness of the base material is required.
Roughness $R_z = 10 \text{ to } 30 \mu\text{m}$.

Base Material Softer than Expander: Anchorage to the bore of the base material occurs automatically due to the serrations on the sleeve of the KOENIG EXPANDER®.

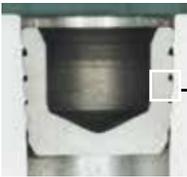

ANCHORAGE PRINCIPLE

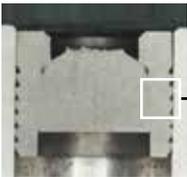

Anchorage due to plug sleeve serrations
KOENIG EXPANDER® Series SK
 In aluminum-alloy HB = 90

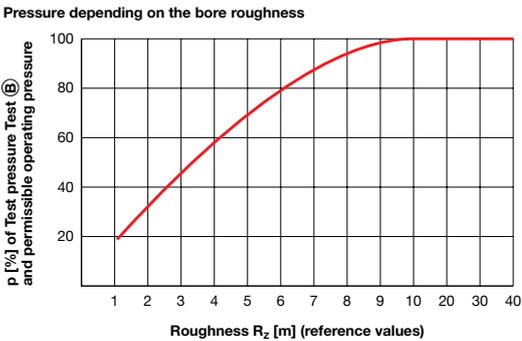

Anchorage due to plug sleeve serrations
KOENIG EXPANDER® Series MB 850
 In aluminum-alloy HB = 90

Anchorage due to plug sleeve serrations
KOENIG EXPANDER® Series LP
 In aluminum-alloy HB = 90

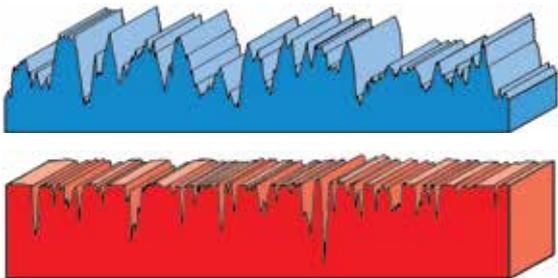

Sufficient anchorage due to plug sleeve serrations
KOENIG EXPANDER® Series LK 950
 In aluminum-alloy HB = 90

BORE ROUGHNESS REQUIREMENTS

When installing KOENIG EXPANDER® plugs in hard base material positive anchoring is not possible. To attain suitable working pressures and anchorage, it is necessary to have a bore roughness of $R_z = 10\text{--}30 \mu\text{m}$. At a roughness greater than $R_z = 30 \mu\text{m}$ leakage might occur.

ROUGHNESS PROFILE

Required Roughness Profile

The ideal bore roughness for anchorage is attained by drilling with a twist drill or a core drill.

Undesirable Roughness Profile

By reaming, a one-sided, smooth roughness profile is created. This is not desirable.

INSTALLATION INSTRUCTIONS FOR SERIES MB

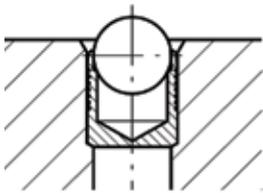

Fig. 1

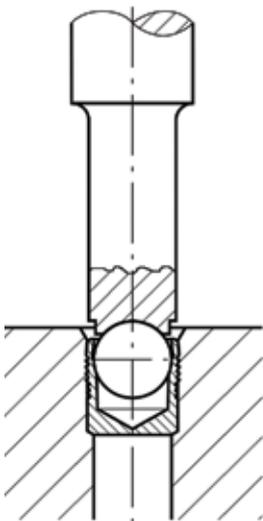

Fig. 2

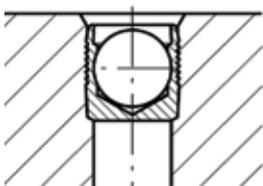

Fig. 3

DRILLED HOLE

- The drilled hole must be within the tolerances shown on the preceding dimensional sheets.
- The counterbored hole (d_2) must be properly sized for the through hole (d_3) according to the dimensional sheets.
- Holes must be round within 0.05 mm.
- With hard materials the bore roughness should be from $R_z = 10-30 \mu\text{m}$ for best results.
- Longitudinal rifles and spiral grooves should be avoided. These influence the sealing effectiveness.
- The bore must be free of oil, grease and chips.

SETTING PROCEDURE

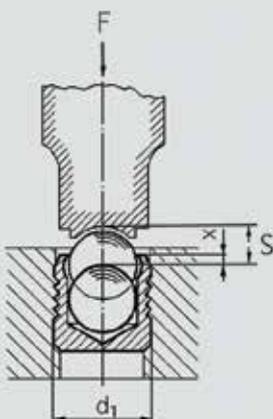

- With the ball facing out the KOENIG EXPANDER® is inserted in the counterbored hole. The top sleeve should not be above the surface of the base material (Fig. 1).
- With only a slight or no counterbore, the base of the sleeve must be adequately supported during installation.
- The ball can now be pressed in until the top of the ball is below the edge of the sleeve (Fig. 2 and 3). Corresponding approximate values for stroke S as well as the dimensions X are from the table below.

Note:

- Use the proper size setting tool for the KOENIG EXPANDER® according to the data sheet.
- Spray cleaning with air drying is the only way to clean/degrease plugs before installation. Do not dip and vacuum dry the plugs.

PRESS

Small quantities or single parts can be installed with a hammer and a setting tool. Installation can also be done with an arbor press. It is preferred to limit stroke travel when using a press because insertion force is difficult to control. KOENIG EXPANDER® plugs are also ideal for automated installation because they are problem free.

INSTALLATION CHART

		Series MB 600 / MB 700 / MB 850													
d1 [mm]		3	4	5	6	7	8	9	10	12	14	16	18	20	22
S [mm]	Stroke (approx. values)	1.2	1.5	2.0	2.5	3.0	3.5	4.0	4.5	5.5	6.35	7.0	8.0	9.0	10.0
X [mm]	Position of Top of Ball Relative to Top of Sleeve ±0.2	0.4	0.2	0.4	0.4	0.4	0.3	0.4	0.4	0.4	0.4	0.6	0.6	0.8	0.8

		Series MB 600 Inch-Version

S [in]	Stroke (approx. values)	.031	.047	.059	.079	.094	.109	.118
X [in]	Position of Top of Ball Relative to Top of Sleeve	Flush to .012 Below the Sleeve						

INSTALLATION INSTRUCTIONS FOR SERIES MB

PLUG REMOVAL

With KOENIG EXPANDER® MB Series removal of the plug is possible. The plug can be drilled out with a carbide tipped drill or with a high speed steel drill.

Plug Removal Drill Bit Recommendation		
MB 600-030 to 140	Ball HB ~250	High Speed Steel Drill
MB 600-093 A	Ball HRC ~55	Carbide Tipped Drill
MB 600-125 A to 281 A	Ball HB ~250	High Speed Steel Drill
MB 700-030 to 220	Ball HRC ~45	Carbide Tipped Drill
MB 850-030 to 220	Ball HRC ~45	Carbide Tipped Drill

PROCEDURE:

- For KOENIG EXPANDER® smaller than 6mm or .250 inches in diameter:
Drill out, in one process, to the **next larger diameter** according to the data sheet.
- For KOENIG EXPANDER® models larger than 6mm or .250 inches in diameter:
Drill out in several steps with last step to the **next larger diameter** according to the data sheet.
- Clear chips, remnants of the sleeve, and oil and grease from the bore.
- Inspect bore to confirm that it meets all requirements.
- Install a new KOENIG EXPANDER®.

Note:

After plug removal always use the next larger size plug.

INSTALLATION INSTRUCTIONS FOR SERIES SK

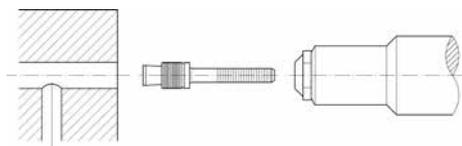

Fig. 1

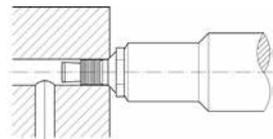

Fig. 2

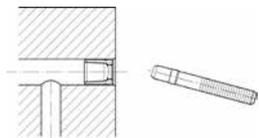

Fig. 3

DRILLED HOLE

- The drilled hole must be within the tolerances shown on the preceding data sheets.
- Holes must be round within 0.05 mm.
- With hard materials the bore roughness should be from $R_z = 10\text{--}30\ \mu\text{m}$ for best results.
- Longitudinal rifles and spiral grooves should be avoided. These influence the sealing effectiveness.
- The bore must be free of oil, grease and chips.

SETTING PROCEDURE

- Insert the plug in the tool, making sure that the sleeve is against the nosepiece (Fig. 1).
- After inserting the plug into the hole (ensuring the tool is flush to the work surface) activate the tool to expand the plug. The mandrel will break apart when the proper tension has been reached (Fig. 2 and 3).

Note:

- The assembly of KOENIG EXPANDER® plugs should only be done in a **clean working area**.
- The sleeve and mandrel of the **plug should not be cleaned, lubricated or have sealant (compound) applied**.

TOOLS

For trouble free installation of KOENIG EXPANDER® plugs use the tools and appropriate components according to the data sheet.

PLUG REMOVAL

With KOENIG EXPANDER® SK Series plug removal is possible.

PROCEDURE:

- Drive the mandrel from the sleeve with a punch.
- Drill out the sleeve and remove the mandrel.
- Bore the hole to the **next larger Expander diameter** per the data sheet.
- Clear chips, remnants of the sleeve, and oil and grease from the bore.
- Inspect bore to confirm that it meets all requirements.
- Install a new KOENIG EXPANDER®.

Note:

After plug removal always install the next larger size plug.

INSTALLATION INSTRUCTIONS FOR SERIES LK

DRILLED HOLE

1. The drilled hole must be within the tolerance shown on the dimensional sheets.
In base materials with high hardness or hardened materials:
 - < 280HB the bore tolerance should be 0 / + 0.12
 - \geq 280HB the bore tolerance should be +0.05 / + 0.15
2. Holes must be round within 0.05 mm.
3. With hard materials the bore roughness should be from $R_z = 10\text{--}30\ \mu\text{m}$ for best results.
4. Longitudinal rifles and spiral grooves should be avoided. These influence the sealing effectiveness.
5. The bore must be free of oil, grease and chips.

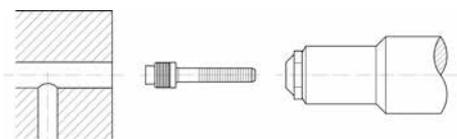

Fig. 1

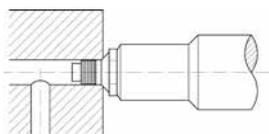

Fig. 2

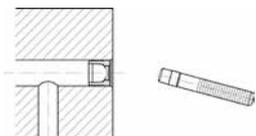

Fig. 3

SETTING PROCEDURE

- Insert the plug in the tool, ensuring that the sleeve is against the nosepiece (Fig. 1).
- After inserting the plug into the hole activate the tool to expand the plug.
- The mandrel will break apart when the proper tension has been reached (Fig. 2 and 3).

Note:

- The assembly of KOENIG EXPANDER® plugs should only be done in a **clean working area**.
- The sleeve and mandrel of **the plug should not be cleaned, lubricated or have sealant (compound) applied**.

TOOLS

For trouble free installation of KOENIG EXPANDER® plugs use the tools and appropriate components according to the data sheet.

PLUG REMOVAL

With KOENIG EXPANDER® plugs LK Series plug removal is possible.

PROCEDURE:

- Drive the mandrel from the sleeve with a punch.
- Drill out the sleeve and remove the mandrel.
- Bore the hole to the **next larger Expander diameter** per the data sheet.
- Clear chips, remnants of the sleeve and oil and grease from the bore.
- Inspect bore to confirm that it meets all requirements.
- Install a new KOENIG EXPANDER®.

Note:

After plug removal always install the next larger size plug.

INSTALLATION INSTRUCTIONS FOR SERIES LP

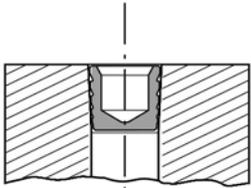

Fig. 1

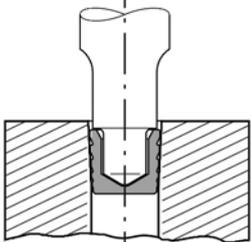

Fig. 2

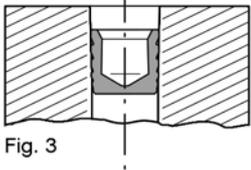

Fig. 3

DRILLED HOLE

- The drilled hole must be within the tolerances shown on the dimensional sheets.
- A 1:12 cone rate must be maintained as per the specification sheet.
- Holes must be round within 0.05 mm.
- With hard materials the bore roughness should be from $R_z = 10-30 \mu\text{m}$ for best results.
- Longitudinal rifles and spiral grooves should be avoided. These influence the sealing effectiveness.
- The bore must be free of oil, grease and chips.

SETTING PROCEDURE

- With the setting hole facing out, the LP-plug is inserted in the cone bore. The top sleeve should not be above the surface of the base material (Fig. 1).
- The LP-plug can now be pressed in with the setting tool. Corresponding approximate values for stroke S are from the table below (Fig. 2).
- Installed LP-plug (Fig. 3).

Note:

- Use the proper size setting tool for the KOENIG EXPANDER® according to the data sheet.
- A higher setting force might occur if the LP plugs are washed before installation.

PRESS

- It is preferred to limit travel when using a press because insertion force is difficult to control.
- Recommended setting speed is 5 mm/sec.
- The KOENIG EXPANDER® ensures an optimum orientation, it works perfectly with automatic processing.

PLUG REMOVAL

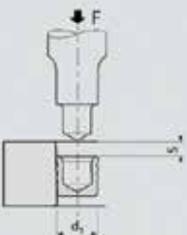

With KOENIG EXPANDER® LP Series plug removal is possible. The plug can be drilled out with a high speed steel drill.

PROCEDURE:

- Drill out, in one process, to the next larger diameter, nominal diameter d4 according to the data sheet.
- Drill the taper hole with a reamer up to diameter d3 according to the data sheet.
- Clear chips, remnants of the sleeve, and oil and grease from the bore.
- Install a new KOENIG EXPANDER®.

Note:

After plug removal always install the next larger size plug.

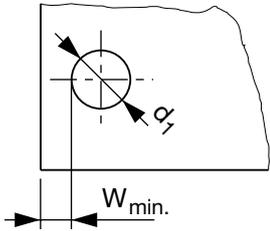

INSTALLATION CHART

Distance to External Wall

Distance to Exterior Wall

Wall Thickness Between Bores

WALL THICKNESS / DISTANCE FROM EDGE

As the radial expansion of the KOENIG EXPANDER® sleeve occurs, the base material in which it will be anchored plastically deforms. The resultant strength, as well as the hydraulic pressure and temperature service conditions depending on the expander type and characteristics of the base material, require minimum wall thickness, or distance from edge.

The guideline values for minimum wall thickness and distance from edge ($W_{min.}$) express these influencing factors. At these minimum values, only slight deformation on the exterior profile of the base material of less than 20 μm is likely. This does not affect the function of the KOENIG EXPANDER®. Below the guideline values ($W_{min.}$) the possibility of overloading the base material exists, which can adversely influence the function of the KOENIG EXPANDER®. In such cases tests must be conducted.

Guideline values $W_{min.}$ for wall thickness and distance from edge

KOENIG EXPANDER® diameters Series MB / SK and LP

$$d_1 \geq 4 \text{ mm: } W_{min.} = f_{min.} \times d_1$$

$$d_1 < 4 \text{ mm: } W_{min.} = f_{min.} \times d_1 + 0.5 \text{ mm}$$

KOENIG EXPANDER® diameters Series LK / RE

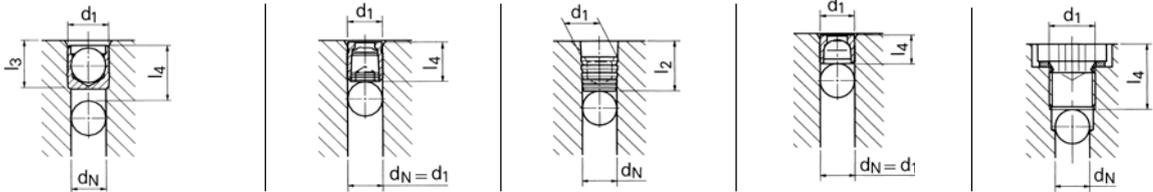

$$d_1 \geq 5 \text{ mm: } W_{min.} = f_{min.} \times d_1$$

$$d_1 = 4 \text{ mm: } W_{min.} = f_{min.} \times d_1 + 0.5 \text{ mm}$$

d_N = Given nominal bore / system bore size

*Installation Lengths Series MB

The required installation length (l_4) min. for MB plugs is for base materials with hardness greater than HB = 90. For softer materials, deeper installation is required.

ROUNDNESS TOLERANCE

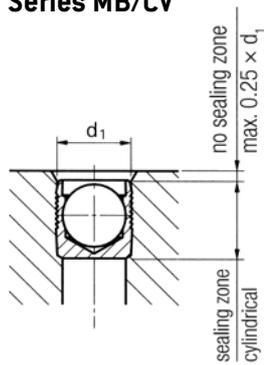

To ensure reliable functioning of the KOENIG EXPANDER® with regard to pressure performance and to ensure leak tight sealing, a **roundness tolerance of $t = 0.05 \text{ mm}$** must be held.

By using a double lipped twist drill, the called out hole and roundness tolerances are reached. Better tolerances, particularly for larger diameter holes, can be held by using a **triple lipped twist drill**.

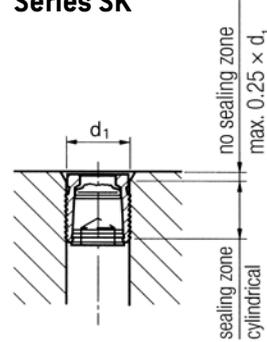

CONICITY OF THE BORE

Within the effective sealing area of the KOENIG EXPANDER, the bore must be according to the dimensional sheets. The bore lead in can be chamfered up to a depth of **$0.25 \times d_1$ (LK: $0.15 \times d_1$)** because this area has no significant effect on the sealing function.

GALVANIC CORROSION

In choosing a KOENIG EXPANDER® you must consider that the material of the sealing plug and the material of the production piece can show different electrical potentials. In the presence of an electrolyte (e.g. 5% water-NaCl solution), this potential difference causes electrochemical attack on the least noble of the metals in contact – galvanic corrosion. In this case, either the base material or its surface protection will become the anode and will be transferred to the pure metal of the cathode. The corrosion speed or the current density will be determined by the relative surface area or volume of the anode and cathode as illustrated below.

Large Anode Area —> Low Current Density at the Anode —> **Slow Corrosion**

Small Anode Area —> High Current Density at the Anode —> **Fast Corrosion**

GALVANIC CORROSION

EFFECT OF GALVANIC CORROSION

The following table shows the expected galvanic corrosion behavior of KOENIG EXPANDER® plugs in common base materials allowing for the relative surface areas of both metals, which influences the speed of corrosion.

Key to the galvanic corrosion behavior of KOENIG EXPANDER® plugs in the presence of an electrolytic medium installed in base materials per the above table.

Suggestions to Prevent Galvanic Corrosion

- Choose materials with no or low potential difference.
- Use corrosion reducing designs, i.e. if possible prevent the accumulation of fluids on the outer surface of the workpiece.
- By using suitable surface coatings, corrosion attack can be considerably reduced.

Salt spray testing per DIN EN ISO 9227 is available upon request

INSTALLATION INSTRUCTIONS FOR KOENIG CHECK VALVE®

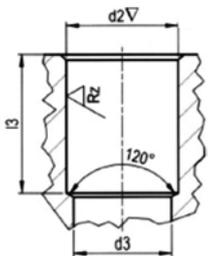

Fig. 1

Before Installation

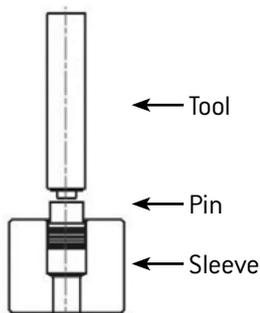

Fig. 2

After Installation

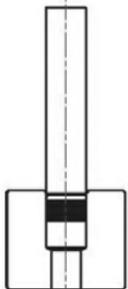

Fig. 3

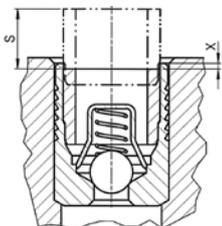

Fig. 4 (Reverse Flow)

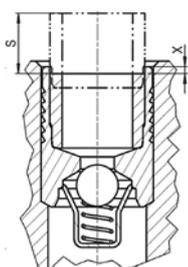

Fig. 5 (Forward Flow)

DRILLED HOLE

- The drilled hole (Fig. 1) must be within the tolerances shown on the preceding dimensional sheets.
- The counter-bored hole (d2) must be properly sized for the through hole (d3) according to the dimensional sheets.
- Hole must be round within 0.05 mm.
- With hard materials (HB > 190) the bore roughness should be from Rz = 10 – 30 µm for best results.
- Longitudinal rifles and spiral grooves should be avoided.
- The bore must be free of oil, grease and chips.
- Additional reaming operation on the hole is not required.

SETTING PROCEDURE

- With the pin facing out, the KOENIG CHECK VALVE® is inserted in the counter-bored hole (Fig. 2). The top surface of the sleeve should not be above the top surface of the base material.
- With only a slight or no counter-bore, the base of the sleeve must be adequately supported during installation.
- The pin can now be pressed in until the top of the pin is flush with the top surface of the sleeve. Corresponding approximate values for stroke S, as well as the dimension X can be referred from the dimensional sheets (Fig. 3, 4 and 5).

Note

- Use the proper size setting tool for the KOENIG CHECK VALVE® according to the data sheet.
- Clean/degrease the KOENIG CHECK VALVE® before installation; only spray cleaning with air drying is allowed (no dipping or vacuum drying).
- Sealants or locking compounds should not be applied on the KOENIG CHECK VALVE®.

PRESS

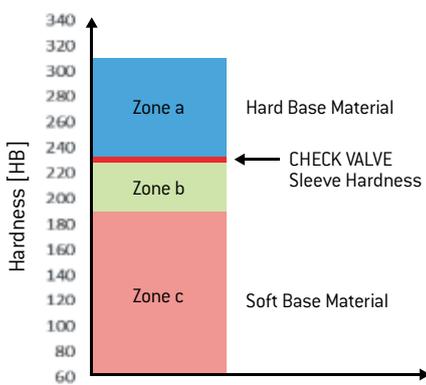

Small quantities or single parts can be installed with a hammer and setting tool. Installation can also be done with an arbor press. It is preferred to limit stroke travel when using a press because insertion force is difficult to control. The KOENIG CHECK VALVE® is also ideal for automated installation.

ANCHORAGE PRINCIPLES FOR KOENIG CHECK VALVE®

The required bore roughness is directly related to the hardness and the mechanical characteristics of the base material. Depending on the combination of the KOENIG CHECK VALVE® and the base material, anchorage takes place either by the groove profile of the KOENIG CHECK VALVE® sleeve biting into the base material or on anchorage to the surface roughness of the bore.

Note:

When selecting a KOENIG CHECK VALVE®, the bore roughness must always be adjusted according to the hardness of the base material. Anchorage between sleeve and base material is achieved when the sleeve is a minimum of HB = 30 greater than the base material. If the hardness difference is less, hole roughness of 10 to 30 µm is needed to achieve good anchorage for the rated working pressure differential values.

- Zone a – Hard Base Material (HB > 220)
To achieve the allowable working pressure, anchorage to the bore roughness of the base material is required.
Roughness $R_z = 10 - 30 \mu\text{m}$.
- Zone b – Transition Zone (HB 190 - 220)
To achieve the allowable working pressure, anchorage to the bore roughness of the base material is required.
Roughness $R_z = 10 - 30 \mu\text{m}$.
- Zone c – Soft Base Material (HB < 190)
Anchorage to the bore of the base material occurs automatically due to the serrations on the sleeve.

Reference:

Base Material of the Installation		
Steel	Cast Iron	Aluminum Alloy
Rz = 10 – 30 µm		Rz = 4 – 30 µm

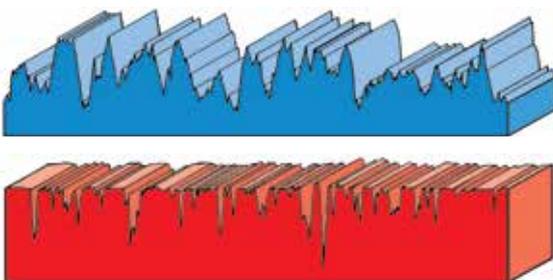

ROUGHNESS PROFILE

Required Roughness Profile

The ideal bore roughness for anchorage is attained by drilling with a twist drill or a core drill.

Undesirable Roughness Profile

By reaming, a one-sided, smooth roughness profile is created. This is not desirable.

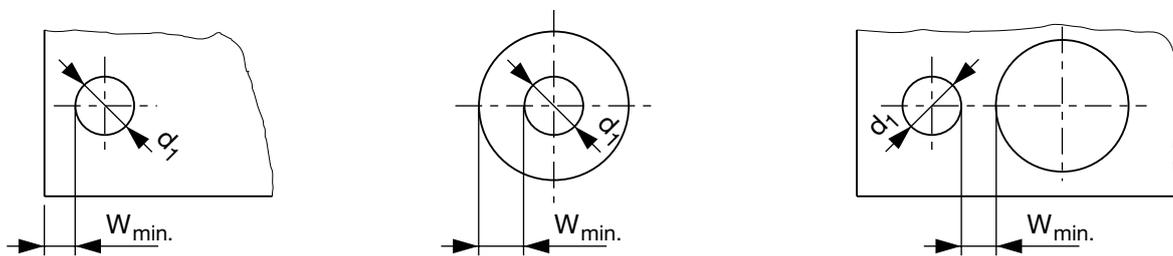

DESIGN GUIDELINES FOR KOENIG CHECK VALVE®

WALL THICKNESS / DISTANCE FROM EDGE:

As the radial expansion of the KOENIG CHECK VALVE® sleeve occurs, the base material in which it anchors plastically deforms. The resultant strength, as well as the hydraulic pressure and temperature service conditions depending on the characteristics of the base material, require a minimum wall thickness or distance from edge.

The guideline values for minimum wall thickness and distance from edge ($W_{min.}$) express these influencing factors. At these minimum values, only slight deformation on the exterior profile of the base material of less than 20 μm is likely. This does not affect the function of the KOENIG CHECK VALVE®. Below the guideline values ($W_{min.}$) the possibility of overloading the base material exists, which can adversely influence the function of the KOENIG CHECK VALVE®. In such cases, tests must be conducted.

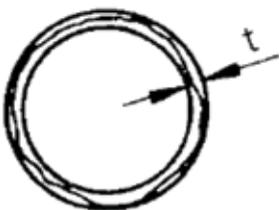

$$W_{min.} = f_{min.} \times d_1$$

Base Material of the Installation				
ETG-100 / 44SMn28 AISI 1144	EN 1563: GJS-600-3 ASTM A536: 80-60-03	AISI 303 EN 1.4305 X8CrNiS18-9	EN 1563: GJS-450-10 ASTM A536: 65-45-12	AlCu4Mg1 / EN AW-2024-T3 AA: 2024 T4/T6
Factor, f_{min}				
0.4	0.5	0.5	0.8	0.5

ROUNDNESS TOLERANCE

To ensure reliable functioning of the KOENIG CHECK VALVE® with regard to pressure performance and to ensure leak tight sealing, a roundness tolerance of $t = 0.05 \text{ mm}$ must be held. By using a double-lipped twist drill, the called out hole and roundness tolerances are reached. Better tolerances, particularly for larger diameter holes, can be held by using a triple-lipped twist drill.

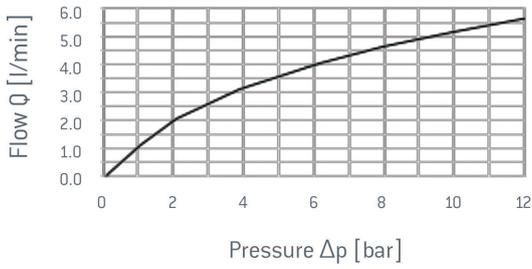

CONICITY OF THE BORE

Within the effective anchorage area of the KOENIG CHECK VALVE®, the bore must be in accordance with the dimensional sheets. The bore lead in can be chamfered up to a depth of $0.25 \times d_1$ [check valve diameter] because this area has no significant effect on the anchorage function.

TECHNICAL INFORMATION KOENIG RESTRICTOR®

SFC KOENIG provides several restrictor options for different application requirements, and customers can select the restrictor's orifice size. This allows you to have complete design control – CV expansion and threaded restrictors are custom-made to meet your orifice performance requirements. As with any component in your system design, there are many technical factors to consider. This is one method for calculating orifice diameter for the SFC KOENIG restrictor products.

- This equation was derived by rearranging Bernoulli's Equation and using a Coefficient of Discharge (CD).
- The Coefficient of Discharge (CD) accounts for pressure losses resulting from factors such as orifice geometry, turbulence near the orifice hole, the length of the orifice hole, and flow dynamics.
- This equation for calculating the restrictor orifice diameters should be used as reference only. SFC KOENIG recommends that you perform testing in the actual application environment to determine the flow constant.
- This equation is intended as a guide for fluid applications only; it is not applicable for gas flow applications.

Metric

To calculate restrictor orifice diameter in mm:

$$d_{\text{orifice}} \approx \sqrt{2.144 \times Q \left(\sqrt{\frac{SG}{\Delta p}} \right)}$$

To calculate restrictor flow rate in mm:

$$Q \approx \frac{d_{\text{orifice}}^2}{2.144 \times \sqrt{\frac{SG}{\Delta p}}}$$

Where:

- d_{orifice} > Orifice diameter, measured in mm
- Q > Fluid flow rate, measured in liters/minute
- Δp > Fluid pressure difference across the restrictor, measured in bar
- SG > Specific gravity of the fluid
- 2.144 > Constant = Unit conversion factor x CD

Please visit our web site for a more precise flow calculator formula

Metric

To calculate orifice length in mm:

$$L = (\emptyset \times 0.207) + t$$

L = length of orifice (mm)

\emptyset = orifice diameter (mm)

t = see chart to right

Tolerance: +/- [($\emptyset \times 0.021$) + 0.13] mm

RE Size	t (mm)
4 mm	0.67
5 mm	0.76
6 mm	0.97
7 mm	0.89
8 mm	0.81
9 mm	1.14
10 mm	1.14

Numbers in parentheses indicate hardness values, which are outside the definition area of the standard hardness test, but often used as approximate values. The Brinell values in parenthesis are only used when measured with a hard metal ball.

1) Calculated as: HB = 0.95 x HV

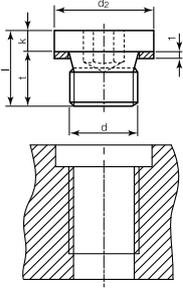

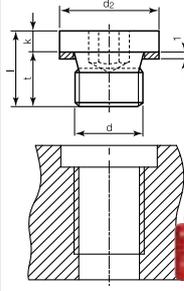

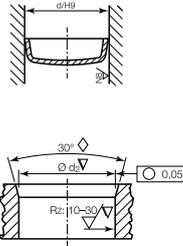

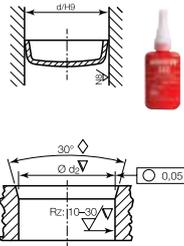

2) The tensile strength values shown in the table are only to be used as approximate values. To get the exact tensile strength values a tensile test must be performed.

QUALITY ASSURANCE

At SFC KOENIG quality is our highest priority. Our components meet customers' ever-increasing demands for performance, reliability and safety with efficient and integrated quality and reward management. As the market leader in the area of high-quality sealing technology, our customers predominantly include OEMs and suppliers in the automobile and industrial hydraulics sector. SFC KOENIG is certified according to IATF 16949 and ISO 14001 and delivers "Total Quality Management" to our customers through:

Clear specifications

in cooperation with our suppliers.

Precise instructions and work processes

for all staff.

Rules

for testing.

Process control

in production and installation.

Quality monitoring

using statistical techniques such as SPC, control charts, etc.

Design control

in development, planning and change management.

Staff training

by regular internal auditing and implementation of quality circles.

Important:

All KOENIG EXPANDER®, KOENIG RESTRICTOR® and KOENIG CHECK VALVE® products are identified by batch numbers (production serial number) on the package label. This batch number ensures traceability of all quality-related characteristics of production and procurement.
